

# SpringBoard Lite

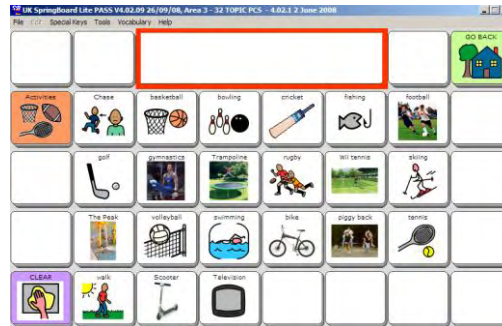

## Linking a New Page to a Button

## Quick Guide

Created 08/09 JC  
Updated

You now need to link the new page to a button

- Decide which page you want your new page to open/link from e.g. you might want the 'DVDs page' in 'Activities' beside 'television'
- Select 'Tools' 'Modify Page'
- Find the page e.g. Activities
- Choose and select the 'link' button

- Select 'spell text to display'
- At the top, select 'Page Link' rather than writing a message for the button
- You will be asked 'Do you want the linked page to close after you select a key?' Select 'no'
- Then select your page e.g. DVDs
- Press OK
- Go to 'change icon' and choose a symbol or picture for 'DVDs'
- Change the label to 'DVDs'
- Press OK
- Now when you press this new 'DVDs' button, it should take you to your new page
- **You need a 'page link' button on your new page to get out of it again (either to the page you 'linked' from or the 'home' page).**
