

SpringBoard Lite

Using a Digital Image as an Icon

Quick Guide

Created 08/09 JC
Updated

First, you need to have your images stored on a USB memory stick where you can find them easily i.e. named and in a folder

- Insert the USB stick into the Springboard Lite
- Modify the buttons as usual
- When you go into 'change icon' select 'import icon'
- Find the image you want and press it to select- a green tick will appear
- Select OK
- You may wish to rename the icon at this stage
- Press OK
- You then have the choice to save this icon in a category if you wish, or press cancel if you don't want to
- The image should now be on your button and you can continue with your programming
