iPad Apps for Learners with Dyscalculia/Numeracy Difficulties is one of over 30 posters available from the Downloads section of the CALL Scotland web site. It was first launched in October 2017 and has been downloaded nearly 12,000 times. Since our last update a few apps have disappeared; others have had their names / icons or web addresses changed and we have added 10 apps to the poster.

The wheel is by no means comprehensive but tries to find apps that will help to embed numerical learning and to give opportunities for repeated practice of concepts that cause difficulty. We would stress that, particularly for dyscalculia and maths, individual apps provide useful practice and reinforcement, but are not a substitute for sound teaching.

If you use the electronic version, clicking on the individual app names or icons will take you to information on each app in the Apple App store.

CALL Scotland runs courses on Technology to support Dyslexia and Dyscalculia at our centre in Edinburgh and at your school, by request:

https://www.callscotland.org.uk/professional-learning/.

Some developers have chosen to make their resources available through a web site, rather than develop separate apps for the various laptops and tablets used in schools.
